Build Your Own AI

Interview Questions & Answers

1. What is Ollama?

Answer: Ollama is a free tool that helps us download and run AI models on our own computer. We can use models like Llama and DeepSeek locally, without depending on a cloud service.

Example: `ollama run llama3`

Remember: Ollama makes it easy to run AI models locally.

2. What does `ollama pull nomic-embed-text` do?

Answer: This command downloads the nomic-embed-text model to our computer using Ollama. The model converts text into numerical values called embeddings, which help AI compare and find similar text.

Remember: `ollama pull` means download a model.

3. What does `ollama pull llama3.2` do?

Answer: This command downloads the Llama 3.2 AI model to our computer using Ollama. After downloading, we can run it locally to ask questions, generate text, and perform other language tasks.

Remember: It downloads Llama 3.2 so we can use it on our computer.

4. What is MSYS2 UCRT64 and what does it do?

Answer: MSYS2 is a software environment for Windows that provides tools to build programs. UCRT64 is one of its environments. It provides the GCC compiler and libraries needed to build C and C++ programs for Windows.

Remember: MSYS2 provides development tools; UCRT64 is an environment that includes GCC and libraries.
